

Main stats + post hoc

Blockwise

HOV acc, hta = yes, lta = yes rt, hta = yes, lta = yes Nor each block acc, hta = allno, lta = allno rt, hta= 3v2 yes, and allno. lta = 3v1 and 3v2 yes and allno *Therefore krusker wallis + pairwise*

LTA

acc_krusker, p_value = 0.01464, yes rt_krusker, p_value = 0.0001794, yes

acc

group1	group2	p.adj	p.adj.signif
1	2	1.000	ns
1	3v1	0.714	ns
1	3v2	1.000	ns
1	4	0.005	**
2	3v1	1.000	ns
2	3v2	1.000	ns
2	4	0.212	ns
3v1	3v2	1.000	ns
3v1	4	1.000	ns
3v2	4	1.000	ns

→ so group 1 and 4 are significantly different in terms of accuracy

RT

group1	group2	p.adj	p.adj.signif	
1	2	0.196	ns	
1	3v1	1.000	ns	
1	3v2	0.019	*	
1	4	0.000	***	
2	3v1	1.000	ns	
2	3v2	1.000	ns	
2	4	0.189	ns	
3v1	3v2	1.000	ns	
3v1	4	0.163	ns	
3v2	4	1.000	ns	

→ so group 1 and 3v2 are significantly different → group 1 and 4 are highly significantly different

HTA

acc_krusker = 0.03356, yes < 0.05 rt_krusker = 0.008008, yes

ACC

group1	group2	p.adj	p.adj.signif
1	2	1.000	ns
1	3v1	0.762	ns
1	3v2	0.947	ns
1	4	0.022	*
2	3v1	1.000	ns
2	3v2	1.000	ns
2	4	0.634	ns
3v1	3v2	1.000	ns
3v1	4	1.000	ns
3v2	4	1.000	ns

→ there is a significant difference between group 1 vs 4 for acc

RT

group1	group2	p.adj	p.adj.signif
1	2	1.000	ns
1	3v1	0.482	ns
1	3v2	1.000	ns
1	4	0.001	**
2	3v1	1.000	ns
2	3v2	1.000	ns
2	4	0.144	ns
3v1	3v2	1.000	ns
3v1	4	1.000	ns
3v2	4	1.000	ns

→ there is a highly significant difference in rt between group 1 and 4

Stimulus-Wise

HOV acc, hta = no, lta = no rt, hta = yes, lta = yes Nor each stim acc, hta = allno, lta = allno rt, hta = allno, lta = 1,2 - yes, 3,4 - no

LTA

acc_krusker,pvalue = 0.00094, yes rt_krusker,p-value = 1.579e-12, yes **ACC**

group1	group2	p.adj	p.adj.signif
1	2	0.127	ns
1	3	0.022	*
1	4	0.001	***
2	3	1.000	ns
2	4	0.550	ns
3	4	1.000	ns

→ acc diff between 1 and 3 is highly significant → acc diff between 1 and 4 is also highly significant

RT

group1	group2	p.adj	p.adj.signif
1	2	1	ns
1	3	0	****
1	4	0	****
2	3	0	****
2	4	0	****
3	4	1	ns

→ rt diff between 1,3 → rt diff between 1,4 → rt diff between 2,3 → rt diff between 2,4 are extremely significant

HTA

acc_krusker, p-value = 2.844e-05 rt_krusker, p-value = 2.15e-10

group1	group2	p.adj	p.adj.signif
1	2	0.004	**
1	3	0.004	**
1	4	0.000	****
2	3	1.000	ns
2	4	0.411	ns
3	4	1.000	ns

→ 1 vs 2 is highly sig → 1 vs 3 is highly sig → 1 vs 4 is extremely sig

RT

group1	group2	p.adj	p.adj.signif
1	2	0.577	ns
1	3	0.000	****
1	4	0.000	****
2	3	0.000	****
2	4	0.000	****
3	4	1.000	ns

Pavlovian Congruence-Wise

HOV acc, hta = yes, lta = yes rt, hta = yes, lta = yes Nor each block acc, hta = allno, lta = allno rt, hta= 3v2 yes, and allno. lta = 3v1 and 3v2 yes and allno

LTA

ACC

group1	group2	p.adj	p.adj.signif
PC	PI	0.106	ns

RT

group1	group2	p.adj	p.adj.signif
PC	PI	0.76	ns

HTA

ACC

group1	group2	p.adj	p.adj.signif
PC	PI	0.028	*

RT

group1	group2	p.adj	p.adj.signif
PC	PI	0.24	ns

→ Therefore only the HTA accuracy between PC and PI is significantly different

Blockwise pav

LTA PC acc_by block, krusker, p_value = 0.02765
